Team Rules: Binary Ninjas

These rules keep everyone on the same page. Every team member follows them.

Rule 1: Communicate Through Text

Keep the team informed in writing (team chat or text message) about everything that affects the project.

Always tell the team:

- What you are implementing or starting to work on
- When you push code (what changed and which branch)
- Anything that blocks you or changes the plan
- Anything else that is important for the team to know

Examples

Situation	Message to send
Starting a task	"Starting the pause menu now. I'll work in `tetris_ver2.py`."

Rule 2: If You Claim a Task, You Own It

When you claim a task, it is yours until it is finished.

- Say in text that you are claiming it, so the team knows it's taken.
- Finish it, or tell the team early if you can't.
- Don't claim a task you don't plan to complete.
- Don't work on someone else's claimed task without asking them first.

> **Consequence:** If you don't own the tasks you claim, you will be given less work.

Quick Checklist

- [ ] I told the team what I'm working on
- [ ] I told the team what I pushed
- [ ] I claimed my task in writing
- [ ] I finished the task I claimed, or told the team why I couldn't
